Foreign Agricultural Trade of the United States

January/February 1986

Digest

U.S. Farm Exports Drop Record Amounts in 1985 (see p. 2). U.S. farm product exports dropped a record amount in value and volume in calendar year 1985 to their lowest levels in nearly a decade. Volume dropped 28 million tons to 118.7 million tons. The lower volume and declining world prices reduced value by \$8.8 billion to \$29 billion. Declining export value and increasing import value reduced the U.S. agricultural trade surplus to \$9.1 billion, its lowest level since 1972.

1985 Imports Remain Firm (see p. 68). U.S. farm imports rose \$640 million in value in 1985 to \$20 billion, despite declines in some products. Imports from developing countries accounted for \$11.6 billion compared with \$7.9 billion from developed countries. An expanding U.S. economy, a January freeze in Florida, a spring frost in the Northwest, a strong dollar, and rapid price increases for some products spurred the increase in spending for foreign goods.

Dollar Slide Continues Through 1985 (see p. 109). The U.S. dollar fell about 20 percent in 1985 from its February peak against major currencies. The decline may slow its pace in 1986 because of more limited foreign government cooperation with the United States to lower the dollar further.

U.S. Agricultural Aid Abroad Increases (see p. 113). Concessional farm exports under U.S. Government-financed programs rose to nearly 7.7 million tons in fiscal year (FY) 1985 (October 1984-September 1985), about 25 percent over FY 1984 levels. Value increased about 30 percent to almost \$1.7 billion. In response to the African famine, P.L. 480 shipments reached 6.93 million tons, a 12-year peak, and P.L. 480 Title II donations reached a record high.

Import Patterns Change in Africa and the Middle East (see p. 121). Sub-Saharan Africa was the only region in Africa and the Middle East in which U.S. farm exports increased in 1985. Exports to the region rose about 40 percent from 1984 levels, primarily as food aid to drought-stricken countries. Exports to North Africa and the Middle East declined one-third from 1984 levels to \$1.25 billion each. North Africa has been the leading importer of U.S. agricultural products in Africa and the Middle East for the last 15 years. Exports to South Africa declined about 75 percent to \$108 million as domestic production regained normal levels.

Ranking of Major Farm Exporters Remains Stable (see p. 128). The United States, France, and The Netherlands remained the top three agricultural exporters during 1979-1984. Brazil moved from fifth to fourth place in 1984 due to sharply increased coffee export values. Argentina jumped from 11th to 9th place because of improved grain and soybean exports and replaced Italy among the 10 leading exporters.

U.S. Farm Exports Drop Record Amounts in 1985

U.S. farm product exports dropped record amounts in both value and volume in calendar year 1985 to their lowest levels in nearly a decade. Volume dropped 28 million tons to 118.7 million tons. The lower volume and declining world prices reduced value \$8.8 billion to \$29 billion. Declining export value and increasing import value reduced the U.S. agricultural trade surplus to \$9.1 billion, its lowest level since 1972.

The 1985 change in U.S. agricultural exports was the largest annual adjustment since 1973, when volume rose a record 33 million tons. Wheat led all other commodities in changing volume in both years, falling 17.4 million tons in 1985 to 24.8 million tons. Coarse grain exports fell more than 6 million tons in 1985; soybean exports 2.6 million tons; and cotton export volume dropped 27 percent.

U.S. World Trade Share Slips

The decline in U.S. farm product exports reflects developments affecting all exporters; however, the relative U.S. position has deteriorated. In 1985, foreign economic growth remained nearly unchanged from 1984's modest 3.1 percent and fell in the foreign industrialized economies, the largest U.S. market. Furthermore, 1985 was the third year of the last 5 with falling commodity prices and a growth rate for world trade volume that failed to exceed growth in world gross national product (GNP). These developments contrasted strongly with the rapid rises in prices, GNP, and trade in the 1970's, and affected all exporters. However, the U.S. dollar rose in real terms for the seventh consecutive year in 1985, and overseas agricultural production remained strong. As a result, the United States shouldered a larger share of the agricultural trade adjustment and saw its world agricultural trade share drop for the fifth consecutive year. Argentina, by contrast, the largest U.S. grain and oilseeds competitor, exported record-high volume for the second time in 3 years.

Largest Annual Change in U.S. Wheat Exports Ever

U.S. wheat exports fell 17.4 million tons in volume in 1985 to 24.8 million tons, as importers either increased their own wheat production or switched some of their purchases to competing exporters. Wheat exports dropped 44 percent in value, or \$2.9 billion, as lower prices and volume took their toll. The largest decline came as a much improved Soviet crop reduced U.S. wheat exports to the Soviet Union 6.6 million tons to 1.1 million tons. China has cut its import needs dramatically in the last 2 years, and reduced its imports of U.S. wheat 3.3 million tons in 1985 to little more than 800,000 tons. Exports to Indonesia fell 400,000 tons due to more than sufficient supplies of domestically produced food grains there, and shipments to Bangladesh fell 500,000 tons as crops rebounded from 1984's flood damage. Tunisia's record-high grain crop led that country to cut purchases of U.S. wheat 800,000 tons, more than offsetting a 200,000-ton increase in sales to Algeria. Most of the increase in shipments to Algeria represented sales under the Export Enhancement Program (EEP) shipped in the last 2 months of 1985. The first shipments of wheat sold to Egypt under the EEP also took place in November and December.

Wheat exports significantly increased to Sudan, Ethiopia, Zaire, Kenya, Mozambique, and Zimbabwe, among others, as the United States responded to disaster-relief needs in Sub-Saharan Africa. U.S. wheat shipments to all of Africa fell more than 2 million tons, however, due to smaller sales to North Africa.

The largest decline in U.S. wheat exports to North Africa was the 2.1-million-ton drop in volume to Morocco. The United States became Morocco's primary wheat supplier in 1984 through the Blended Credit Program, but when the program foundered during the controversy over preference for U.S. shippers in concessional exports, Morocco bought much of its 1985 wheat with French credit.

Competition Reduces U.S. Sales

Competition for world wheat market shares stiffened in 1985 as Morocco's shifting purchases and declining U.S. exports attest. Just as credit proved decisive in Morocco, credit arrangements also helped Argentina draw Peru's purchases, reducing U.S. sales to Peru 400,000 tons. Argentine sales efforts helped whittle U.S. sales to Turkey and Brazil. U.S. wheat exports to Brazil fell 600,000 tons, while those to Turkey fell 800,000 tons due to competition from the European Community (EC) as well as Argentina. U.S. sales to Iraq dropped 600,000 tons as the Iraqi harvest improved and the U.S. market share declined.

Coarse Grain Exports 21 Million Tons Below Peak

U.S. coarse grain exports slipped 6.4 million tons in volume to 51.3 million tons and \$2.1 billion in value to \$6 billion. Increased production by importers and stronger competition by traditional and new exporters have reduced U.S. exports in recent years. However, exports to a few destinations did increase in 1985 due to production shortfalls. Shipments to the Soviet Union rose 2.4 million tons to 13 million tons; Brazil and Venezuela increased their purchases 600,000 tons combined; and sorghum exports to the Sudan rose 400,000 tons due to U.S. disaster-relief efforts in the region.

Importers' Production Rises

U.S. coarse grain exports to South Africa fell 2.3 million tons, a 90-percent decline, as that country's production recovered sufficiently to cover domestic needs and the sporadic resumption of exports. Increased production enabled Mexico to reduce its total coarse grain imports for the second year in a row, and U.S. shipments there fell 1.5 million tons in 1985. Finally, consecutive record and near-record grain harvests in Western Europe nearly trebled EC intervention grain stocks in 1985, made the EC a net exporter of coarse grains for the first time, and reduced U.S. coarse grain exports to Western Europe nearly 25 percent to 6 million tons. In 1982, the United States exported over 16 million tons to Western Europe, which was then the largest customer for U.S. coarse grains.

Japan has been the largest U.S. market for coarse grains since 1983, and in 1984 exports reached 16.2 million tons. In 1985, exports to Japan dropped 2.7 million tons as consumption remained steady and competition from Chinese corn and Thai manioc increased. Exports to Korea dropped 500,000 tons under similar circumstances, and exports to Taiwan dropped 200,000 tons.

Soybean Volume Declines; Soybean Meal Gains

U.S. soybean exports slipped 2.6 million tons in volume in 1985 to 17 million tons and declined 31 percent in value to \$3.7 billion. Soybean exports, which

increased in volume for nearly 20 consecutive years preceding 1983, declined for the third consecutive year in 1985. The largest drop in U.S. soybean exports, 1.7 million tons, was split almost evenly between the EC and the rest of Western Europe. Exports to Eastern Europe fell another 400,000 tons, as oilseed production there rose. In contrast, sales to Japan rose 100,000 tons to 4.4 million tons, and sales to Korea and Taiwan rose as well.

U.S. shipments of soybean meal rose 7 percent in volume in 1985 to 4.7 million tons. However, lower prices decreased value slightly. Shipments to the EC rose 200,000 tons as concentrated feed use increased there in the latter part of the year. U.S. soybean meal exports dropped 31 percent in 1984 during the period of adjustment to the EC dairy quota reduction program.

Horticultural Exports Lower

U.S. horticultural exports fell slightly, as exports of fruits, fruit juices, and vegetables dropped \$130 million to \$2.1 billion, and exports of nuts and preparations rose only \$79 million. Japan replaced Canada as the largest U.S. fruit customer, following a decline in fruit sales to Canada in all categories: fresh (citrus and noncitrus), canned, dried, frozen, and juice. The United States has been losing its share of Canada's fruit imports to Chile, South Africa, the EC, and New Zealand. The drop in U.S. vegetable exports also stems largely from declining sales to Canada, which imports almost exclusively from the United States. U.S. vegetable exports to Canada fell \$75 million as production there increasingly met local needs. (Stephen MacDonald, International Economic Indicators Branch)

Table 1--Agricultural, nonagricultural, and total trade balance

Item	January-December		December	
	1984	1985	1984	1985

1985 Imports Remain Firm

U.S. farm imports rose \$640 million in calendar year 1985 to almost \$20 billion, despite declines for some products, including sugar, rubber, live hogs, cheese, coconut oil, and tea. Volume for many farm products increased, especially for beef, pork, orange juice, and fruits. In December, farm imports moved up to \$1.8 billion compared with \$1.4 billion in December 1984. An expanding U.S. economy, the January freeze in Florida, a spring frost in the Northwest, a continued strong dollar on international markets, and rapid price increases for orange juice, fruits, and cocoa products spurred the advance.

Developing countries shipped farm products worth \$11.6 billion to the United States in 1985 compared with \$7.9 billion from developed countries. Brazil remained the largest source of U.S. agricultural imports, followed by Canada, Mexico, Colombia, France, Australia, and Indonesia.

Noncompetitive Imports Up Despite Declines

Higher values for cocoa and products boosted noncompetitive imports to \$6.9 billion in 1985, despite declines for rubber and tea. Coffee, accounting for 48 percent of U.S. noncompetitive imports, increased slightly to \$3.3 billion. Volume gained almost 5 percent in 1985 to 1.2 million tons. While unit import prices declined from \$1.34 a pound in 1984 to \$1.30 a pound in 1985, severe drought damage to the coffee crop in Brazil pushed the average monthly wholesale price for Brazilian coffee in the U.S. market from \$1.38 a pound in December 1984 to \$1.75 a pound in December 1985. Brazil, Colombia, Mexico, El Salvador, Guatemala, Indonesia, Ecuador, and the Ivory Coast were the major suppliers.

Cocoa and product imports jumped 19 percent in 1985 to \$1.4 billion, reflecting larger imports of cocoa beans, cocoa butter, and chocolate products. With lower U.S. inventories, larger world supplies, and lower prices, U.S. cocoa bean imports are likely to rise in 1986 and could exceed 1985's 270,000 tons. Futures prices for cocoa beans, averaging \$1.06 a pound in 1984, declined below \$1 a pound in 1985, mainly due to record-high world supplies. The Ivory Coast supplied 27 percent of U.S. cocoa import volume in 1985 compared with 22 percent in 1984. Brazil, Ecuador, the Dominican Republic, and Ghana were the other major suppliers.

Natural rubber imports in 1985 declined 21 percent in value to \$654 million because of lower prices. Volume increased to 818,000 tons from 803,000 tons in 1984. Import unit prices dropped 22 percent to \$800 a ton. Reduced inventories, continued growth in the industrial sector, and lower prices are expected to boost import volumes again in 1986. Indonesia supplied 58 percent of U.S. rubber imports, while Malaysia, Thailand, Liberia, and Singapore provided nearly all of the remainder.

U.S. banana imports in 1985 surged 15 percent to \$763 million, reflecting larger volume, with import unit prices unchanged at \$247 a ton. Ecuador replaced Costa Rica as the leading supplier of banana imports, which totaled 756,000 tons, up 43 percent from those of a year ago. Imports from Honduras, the second largest supplier, increased 7 percent to 586,000 tons. Banana imports from Costa Rica and Colombia declined because of high winds and hurricane damage to those crops. U.S. banana imports from Guatemala gained 36 percent to 249,000 tons. Among other

noncompetitive imports, spices and essential oils increased while tea, wool, and silk declined.

Competitive Import Values Up, But At a Slower Pace

Competitive imports rose 4 percent to \$13.1 billion in 1985, as increases for beef, pork, orange juice, fruits, vegetables, tobacco, wine, malt beverages, and grains offset value declines for sugar, cheese, coconut oil, and live hogs.

Meat imports increased 9 percent in value to \$2.2 billion, accounting for most of the gain in competitive products. Because of reduced U.S. beef production and increased consumption, beef imports expanded 4 percent in value to \$1.3 billion, and volume gained 14 percent to 677,000 tons. Australia supplied 39 percent of U.S. beef imports, with New Zealand and Canada combined providing another 39 percent.

Lower U.S. pork production hiked import values 14 percent to a record-high \$861 million. Fresh pork imports from Canada and canned pork from Denmark gained substantially. Volume increased 19 percent to 424,000 tons, with the unit import price falling 4 percent to \$2,032 a ton.

Because of gains from Mexico, live cattle imports increased in 1985 to 836,000 head valued at \$307 million from 753,000 head valued at \$286 million in 1984. Nearly 359,000 head of Canadian feeders and stockers entered the U.S. markets in 1985, down from 1984's 363,000 head. Countervailing duties slowed live hog entries from Canada by 7 percent to 1.2 million head. In 1986, the impact of countervailing duties is expected to reduce U.S. live hog imports further.

U.S. cheese imports, accounting for 49 percent of U.S. dairy product imports in 1985, dropped 3 percent to \$374 million. Volume slowed to 137,000 tons. Western Europe provided 74 percent of all cheeses imported in 1985 compared with 72 percent in 1984. Casein imports from New Zealand rose 3,000 tons in 1985, while those from Ireland increased almost 12,000 tons.

Orange juice from Brazil, fresh grapes from Chile, apple juice from West Germany, and canned pineapples from Asia spurred fruit imports 18 percent to \$1.7 billion. Because of the larger domestic orange crop in 1985, higher yields, and consumer switching from orange juice to other fruit juices, orange juice imports gained only 1 percent to 582 million gallons. Unit import prices for orange juice increased 10 percent, while those for fruits rose 8 percent.

U.S. sugar imports tumbled 27 percent in value to \$812 million and 18 percent in volume to 2.2 million tons due to depressed demand, a larger sugar beet crop, and reduced import quotas. Import unit prices averaged \$369 a ton in 1985 compared with \$415 a ton in 1984. Domestic consumption likely declined about 100,000 tons in 1985. The Dominican Republic, the largest sugar supplier, provided 19 percent of the U.S. sugar import volume in 1985, or 415,000 tons, down about 55,000 tons from 1984. Import volume also declined from most other major suppliers, particularly the Philippines, Argentina, Australia, and Guatemala. U.S. sugar imports gained from some smaller suppliers, including Colombia, El Salvador, Panama, and Malawi.

Vegetable import value gained slightly in 1985 to \$1.4 billion. Volume increased marginally to 2.2 million tons. Higher prices for cucumbers, onions, eggplants,

and peppers boosted the value of fresh vegetables from Mexico to \$480 million from \$436 million in 1984. Canned mushrooms from Taiwan fell 7,000 tons, but potatoes from Canada gained 23 percent to 166,000 tons.

The value of oilseeds and products in 1985 declined 5 percent to \$756 million, due mainly to lower prices for vegetable oils. However, volume rose to 1.4 million tons. Coconut oil imports fell 18 percent in value to \$279 million, but volume increased 19 percent to 450,000 tons. Prices declined sharply throughout 1985 as quantities of major imported vegetable oils expanded. The Philippines supplied 69 percent of all U.S. coconut oil imports.

Slightly higher filler tobacco imports in 1985, mainly from Turkey, Brazil, and Greece, hiked the total value of imported tobacco to \$576 million from \$558 million in 1984. Filler leaf imports increased 9 percent to 158,000 tons valued at \$521 million.

Imports of wine and malt beverages rose 7 percent in 1985 to \$1.6 billion. France, Italy, and West Germany were the major suppliers of wines, with the Netherlands, Canada, and West Germany providing the beers.

Other competitive imports gained, including grains, confectionery products, cashew nuts, cut flowers, nursery stock, fur pelts, and spices. (Charles E. Goode, International Economic Indicators Branch)

Dollar Slide Continues Through 1985

The U.S. dollar fell approximately 20 percent in 1985 from its February peak against major currencies important in world trade. The decline may slow its pace in the opening months of 1986 because foreign government cooperation with the United States to lower the dollar has further receded.

Dollar Decline Slows

The decline of the U.S. dollar continued through the end of 1985. However, the dollar fell at a slower pace than immediately following the September announcement by the five major industrial countries (G-5)--United States, United Kingdom, Germany, France, and Japan--to cooperate in lowering the dollar's value on world currency markets. The dollar's September gains were reversed as a result of the announcement, and the dollar resumed the declining path it had followed since February 1985.

Japanese Interest Rates Rise

Short-term interest rates in Japan rose dramatically at the end of November to support the exchange rate level near 200 Japanese yen per dollar achieved through G-5 intervention. However, higher interest rates conflict with Japan's intention to reduce fiscal stimulus and increase private sector demand. Japan wants its interest rates to subside provided that its capital flows to the United States do not increase and cause a stronger U.S. dollar should U.S. interest rates remain higher than Japanese interest rates.

Lower Interest Rates Sought

Other G-5 members, particularly Germany, want lower interest rates to support their policies of reduced fiscal stimulus to increase private demand. However, some G-5 countries are reluctant to lower their interest rates until U.S. interest rates decline; otherwise, their lower interest rates are likely to drive up the dollar exchange rate. Stronger than expected U.S. economic growth at the end of 1985 has probably forestalled any immediate need for reduced U.S. interest rates that would permit the interest rate differential to increase in favor of other currencies. This would, in turn, permit further reductions in the dollar's value on foreign currency markets.

Nonetheless, U.S. policymakers believe that increased overseas demand through greater foreign fiscal stimulus should replace reduced U.S. stimulus as the Gramm-Rudman law cuts U.S. fiscal budget deficits. Should U.S. interest rates decline from their 1985 level of around 7 percent for 3-month Treasury bills, foreign governments would be in a position to increase their fiscal spending. This would raise foreign incomes and import demand, thereby increasing the value of foreign currencies while decreasing the U.S. dollar. (Edward C. Wilson, International Aggregate Analysis Branch)

U.S. Agricultural Aid Abroad Increases

Concessional agricultural exports under U.S. Government-financed programs rose to nearly 7.7 million tons in volume in fiscal year (FY) 1985 (October 1984–September 1985), about 25 percent over unrevised FY 1984 levels. Value increased about 30 percent to almost \$1.7 billion. In response to the African famine, shipments under Public Law (P.L.) 480 reached a 12-year peak; P.L. 480 Title II donations reached a record high. Overseas donations authorized under Section 416 of the Agricultural Act of 1949, as amended, increased sharply in value and volume. Exports through the Commodity Import Program of the Agency for International Development (AID), financed through economic support funds, accounted for 7 percent of the volume in FY 1985 and 6 percent of the value of Government-financed exports, down from the 1984 shares.

P.L. 480 shipments in FY 1985 rose more than 25 percent over FY 1984's level to 6.9 million tons, the highest volume since the world food crisis. Value increased about 20 percent to approximately \$1.3 billion. P.L. 480 shipments composed about 5 percent of the value of total U.S. agricultural exports, the highest level in 8 years. While the volume of Title I/III shipments was roughly similar to that in FY 1984, Title II donations more than doubled to their highest level in the program's history.

Over 68 countries received P.L. 480 food aid in FY 1985. Major recipients were Egypt, Bangladesh, Sudan, Ethiopia, and Pakistan, which received half the value of shipments. In FY 1984, Egypt, India, Pakistan, Bangladesh, and El Salvador accounted for about 45 percent. Africa received approximately 4 million tons, up from about 3.3 million tons in FY 1984. Shipments to Asia rose about 60 percent to approximately 1.8 million tons. P.L. 480 exports to Latin America fell about 25 percent to slightly less than 900,000 tons. Poland received a small amount of Title II commodities in both fiscal years.

Wheat, soybean oil, wheat flour, rice, and grain sorghum together composed about 80 percent of the value of P.L. 480 shipments in FY 1985. Top commodities in FY 1984 were the same except that corn replaced grain sorghum. P.L. 480 exports accounted for more than 80 percent of wheat flour exports, nearly 40 percent of soybean oil exports, and about 15 percent of rice exports. P.L. 480 also accounted for nearly 15 percent of total wheat and flour exports, the highest share since FY 1977.

FY 1985 exports under Title I/III totaled almost 4 million tons worth nearly \$724 million, slightly less than FY 1984 levels. This accounted for about 55 percent of the volume and value of P.L. 480 shipments. About 60 percent of the value of Title I/III shipments went to Egypt, Bangladesh, Sudan, Pakistan, and Indonesia in FY 1985 compared with Egypt, Bangladesh, Pakistan, Sudan, and El Salvador in FY 1984. Wheat accounted for about three quarters of the volume in FY 1985, up from two-thirds in FY 1984. In FY 1985, wheat accounted for almost 60 percent of the value of Title I/III commodities, of which Egypt received about one-third, followed by Bangladesh, Morocco, Indonesia, and Sudan. Top wheat recipients in FY 1984 were Egypt, Morocco, Sudan, Bangladesh, and Sri Lanka. Wheat flour, the second largest Title I/III commodity in both fiscal years, went mainly to Egypt and Sudan. Other top Title I/III commodities in FY 1985, in value terms, were soybean oil (distributed mainly to Pakistan, Bangladesh, and the Dominican

Republic) and rice (shipped principally to Bangladesh, Madagascar, and Jamaica). In FY 1984, Indonesia, Bangladesh, and Liberia received most of the rice, while soybean oil was shipped primarily to Pakistan, Bangladesh, and El Salvador.

Title II donations in FY 1985 reached a record 2.95 million tons, more than double FY 1984's level. These shipments accounted for more than 40 percent of the volume of P.L. 480 exports, the highest share since FY 1974. The value of Title II commodities rose about 75 percent in FY 1985 to \$566 million. Title II exports comprised about 45 percent of the value of P.L. 480 commodities, the second highest share in the program's history. Voluntary relief agencies distributed slightly more than 40 percent of the value of Title II commodities, down from 60 percent in FY 1984, although the absolute volume increased from more than 690,000 tons to about 920,000 tons. The World Food Program distributed about 25 percent of Title II commodities, up slightly from about 20 percent in FY 1984. Government-to-government shipments increased to 32 percent from about 20 percent.

In value terms, Sudan, Ethiopia, India, Bangladesh, and Pakistan received half of all Title II shipments in FY 1985. Chief commodities were soybean oil, grain sorghum, wheat, corn-soya-milk, and bulgur wheat. In FY 1985, Ethiopia, India, and Sudan were top soybean oil recipients, while Sudan and Niger received most of the grain sorghum. In FY 1984, principal recipients were India, Peru, Poland, Bolivia, and Ghana. Top commodities were soybean oil, corn-soya-milk, bulgur wheat, rice, and flour. India, Peru, and Poland received half of the soybean oil shipments, while India and the Philippines received two-thirds of the corn-soya-milk.

Other agricultural exports through Government-financed programs were made under authority of Section 416 of the Agricultural Act of 1949, as amended. Almost 270,000 tons were donated in FY 1985, worth nearly \$230 million. This compares with FY 1984 shipments of about 50,000 tons, worth \$46 million. Under the program, dairy products were distributed mainly to Mexico, Poland, and Ethiopia in FY 1985, and to Poland, Mexico, and Chile in FY 1984.

Exports under AID's Commodity Import Program decreased 35 percent in volume in FY 1985 to about 534,000 tons. Value fell 13 percent to about \$90 million. Chief recipients were Egypt and Pakistan, with mostly corn and wheat being shipped in FY 1985. In FY 1984, Egypt received almost the entire amount of agricultural commodities, mostly corn, exported under the program. (Mark E. Smith, International Aggregate Analysis Branch and Fannye G. Lockley, International Economic Indicators Branch)

1/ Preliminary

2/ Negative values in the "commercial" column indicate an excess of Government Programs over total exports attributed to reporting lags, classification differences or transshipments through other countries.

Import Patterns Change in Africa and the Middle East

World agricultural trade totaled over \$240 billion during 1980-84. Imports in Africa and the Middle East averaged over \$30 billion, 50 percent of which went to the Middle East, 25 percent to North Africa, 20 percent to Sub-Saharan Africa, and less than 3 percent to South Africa.

Cereals make up the largest portion of agricultural imports in Africa and the Middle East; meat and meat products, which are growing rapidly, are second. Dairy products as a percentage of total imports remain steady. Imports of oilseeds and oilseed products remain less than 10 percent of the total. The United States holds its greatest share in the cereals market, whereas its market share in high value meat and dairy products remains small. Its market share in oilseeds and oilseed products is significant but declining rapidly. Of the four regions studied, imports in North Africa and the Middle East have grown the most during the past 15 years, and North Africa has been the leading importer of U.S. farm exports.

North Africa and Middle East Import Patterns

The tremendous import growth in North Africa and the Middle East over the past 15 years has been the result of increased oil export earnings and credit from major suppliers. Many of the region's countries are oil exporters that have benefited from the oil price hikes in the 1970's. Between 1969 and 1984, oil prices increased over 23 percent per year, resulting in increased revenues. For example, export earnings in Algeria, Bahrain, Oman, Saudi Arabia, and the United Arab Emirates (UAE) grew over 20 percent during this period. The higher revenues drove up demand and imports, including agricultural products.

Credit by major suppliers has also played an important role in import growth. As the market has increased, competition among major exporters has become keener, and suppliers have offered financial incentives in the form of credit, concessional aid, and countertrade to these countries in order to maintain and increase their market shares.

Cereal imports, at \$3 billion, account for more than 33 percent of North Africa's agricultural imports, a 30-percent increase from the share held less than 15 years ago. Meat and meat product imports had the highest rate of growth, but they still account for only 15 percent of agricultural imports in North Africa. Although oilseeds and oilseed products remain a very small part of agricultural imports in the region, they have increased 10 percent per year in the last 5 years.

The composition of agricultural imports in the Middle East has changed significantly, along with rising incomes and the resulting dietary improvements. Cereal imports, once the largest component, are second to meat and meat product imports. Over the past 15 years, meat and meat product imports have grown so rapidly that they now account for almost 33 percent of agricultural imports in the Middle East. Oilseeds and oilseed products have grown the most in recent years, however, they remain a small part of agricultural imports in the region.

Recent growth patterns in North Africa and the Middle East have been characterized by slower growth rates, a result of declining oil revenues. The combination of

peaking oil prices in 1981, declining world oil demand, and proliferating suppliers has sharply reduced the region's export earnings. During 1980-84, Algeria, Libya, Bahrain, Iraq, Saudi Arabia, and the UAE had decreasing export earnings.

Agricultural import growth in North Africa and the Middle East slowed from 18 percent per year during 1969-84 to around 4 percent during 1980-84, largely due to the slower growth of meat and meat product imports.

Sub-Saharan Africa Import Pattern

The import increase in Sub-Sahara Africa has been a result of inadequate domestic food production. Although food output has increased, it has not been able to keep pace with the high population growth. For example, with 1976-78 as a base year, the per capita food production index for 1984 was 91. As a result, imports were needed to meet food requirements. Many countries in the Sub-Saharan region have been receiving increasing amounts of food aid, particularly from the United States and the European Community (EC) and particularly during the recent drought.

Overvalued exchange rates, which make imports cheaper, have also contributed to the increase in imports. Other factors include high internal transportation costs, a result of inadequate infrastructure, and poor marketing systems, which make imported goods to urban areas cheaper than domestically produced goods.

Commercial and concessional food imports to Sub-Saharan Africa have increased about 13 percent per year during the past 15 years, putting heavy pressure on the region's economies. Cereal imports, valued at over \$2 billion, account for 33 percent of agricultural imports, double that of dairy imports. In 1985, cereal imports set a record high, surpassing the peaks of 1984. However, imports of oilseeds and oilseed products have grown the most, almost 20 percent per year, but they still remain a small part of the total in the region.

Import growth in Sub-Saharan Africa has slowed considerably because of increasing financial constraints, not production increases. Regional export earnings peaked in 1980 as prices for principal export crops (that is, cocoa, coffee, tea) fell, and only recently recovered, leaving many countries with a need to conserve foreign exchange and, hence, reduce food imports.

Reduced dairy imports and slower growth in cereal imports slightly depressed agricultural imports in Sub-Saharan Africa during 1980-84 compared with growth of 13 percent per year in 1969-84.

South African Import Pattern

South Africa historically has not been a high growth importer of agricultural products because it follows a policy of self-sufficiency. However, imports have increased rapidly in recent years, particularly cereal imports, as the 1983 drought brought agricultural output to its lowest level in a decade. Corn output in 1984 supplied only 70 percent of domestic needs, and imports were required. During 1982-84, growth in agricultural output was less than that of population. In 1985, cereal production recovered and agricultural imports fell.

Meat and meat products usually make up the largest part of the agricultural import market in South Africa, but now cereal imports hold a 30-percent share of the agricultural imports. Meat and meat product imports, at one time accounting for

nearly 33 percent of the total, account for less than 7 percent. Oilseeds and oilseed product imports are growing rapidly and are the second largest in value terms.

Changing Patterns in U.S. Market Share

The U.S. market share in Africa and the Middle East has been marked by either stability or decline during the past 15 years, largely due to increased competition, a result of financial problems among importers and exporters. First, financial constraints of importing countries has forced a reallocation of funds and a concerted effort to seek less expensive suppliers. These countries also rely on credit to finance their agricultural trade. Until recently, the U.S. Blended Export Credit Program maintained the U.S. market share in North Africa and the Middle East. The EC has offered a similar program to these importers. Hence, nonprice competition has played a part in the U.S. trade pattern. Second, some of the newer suppliers have entered the export market because of their own financial difficulties in an effort to finance their external debt. A prime example is Brazil and its aggressive oilseed export efforts. Third, countertrade between oil exporters and importers has brought more suppliers into the market. In order to reduce dollar outlays, members of the Organization of Petroleum Exporting Countries (OPEC) are trading their oil for agricultural and other products. This trade is not with traditional suppliers but with smaller oil importing countries that have foreign exchange constraints. The new suppliers have not yet gained a large share in the market but have been significant enough to reduce the share of the traditional suppliers, such as the United States. Fourth, Middle Eastern and African countries have actively sought to diversify their food imports for security reasons, just as the oil-dependent countries have sought to diversify their suppliers. Finally, the high value of the dollar has often made the cost of U.S. exports high relative to the cost of exports from competitors.

North Africa has been the highest growth market among the regions considered for U.S. exports during the past 15 years. The United States supplies almost 20 percent of North Africa's agricultural imports and about 30 percent of its cereal imports. However, the U.S. market share in the oilseeds and oilseed products category dramatically declined from 40 percent less than 10 years ago to just over 16 percent in 1982-84.

The Middle East is the only one of the four regions in which the U.S. market share has declined, from almost 17 percent less than 10 years ago to just over 10 percent in 1982-84. U.S. oilseeds and oilseed products suffered the most significant loss, declining from a 45-percent share to a share of less than 15 percent in 1982-84. The U.S. share declined as competitors offered more attractive credit terms and long-term agreements and the United States lost the Iranian market for political reasons. Although cereal imports remain high, the U.S. share has declined to 20 percent, a 50-percent drop from the 1975-77 average. The leading cereal suppliers to this market, other than the United States, are Argentina, Australia, and the EC, particularly France.

The U.S. share of agricultural imports to Sub-Saharan Africa has increased gradually over the years to more than 12 percent in 1982-84. The United States supplies about 25 percent of the region's cereal imports, partly through food aid. The U.S. share of meat and dairy products is minimal.

The U.S. market share of South African imports increased from about 10 percent in 1969-71 to over 30 percent in 1982-84. The U.S. share of the cereals market in 1982-84 was over 80 percent, and although oilseeds and oilseed product imports have increased, U.S. exports have not followed suit.

1985 U.S. Exports

Sub-Saharan Africa is the only one of the four regions in which U.S. agricultural exports increased in 1985. U.S. exports to this region increased almost 40 percent from 1984 levels, primarily because of the large food aid shipments to drought-stricken countries, such as Ethiopia and Sudan. U.S. exports to North Africa and the Middle East declined approximately one-third from 1984 levels to about \$1.25 billion each, as cereal exports fell sharply due to a suspension of the Blended Export Credit Program, increased competition, and increased production. Exports to South Africa declined about 75 percent to \$108 million, as agricultural production regained normal levels.

Outlook for U.S. Exports

The outlook for U.S. farm exports in 1986 is not very promising. Exports to North Africa are expected to increase, but they will not reach 1984's \$1.7 billion. The Export Enhancement Program with Algeria and Egypt should offset some of the losses incurred with the suspension of the Blended Credit program. Coarse grain exports are forecast higher as Algeria and Egypt maintain their policies of increasing meat production. Vegetable oil sales will decline because Egypt has begun purchasing oil from Argentina and Brazil. Exports to the Middle East should remain at 1985 levels. Exports to Sub-Saharan Africa are expected to decline both commercially and concessionally. Reduced allocations under Public Law 480 will account for most of the decline because improved weather conditions have led to a recovery in agricultural production. U.S. cereal exports to South Africa have declined because domestic output should meet the country's needs. However, oilseed exports will remain at 1985 levels because of short supplies in South Africa. U.S. exports should become more competitive in 1986 with the projected weakened dollar. (Stacey Rosen, Africa and Middle East Branch)

Ranking of Major Farm Exporters Remains Stable

Ranking of the world's leading agricultural exporters changed little during 1979-84. However, supply and price changes in particular commodities and countries caused some shifts. Brazil, for example, moved from fifth place (behind West Germany) in 1979-80 to fourth place (ahead of West Germany) in 1984 on the strength of sharply increased coffee export values. Argentina jumped from eleventh place (behind Italy and Belgium-Luxembourg) in 1979-80 to ninth place and replaced Italy among the 10 leading exporters because of improved grain and soybean exports (table 21).

Export Shares of Major Exporters Change

The United States, the world's largest agricultural exporter increased its market share of world agricultural exports from 18.1 percent in 1979-80 to 18.7 percent in 1982-83 when the volume of grain and soybean exports rose. The U.S. market share fell to 18 percent in 1983-84, primarily due to sharply reduced grain export volume. The market shares of France and the Netherlands, the second and third leading agricultural exporters, also suffered. Of the top 10 exporters, Brazil, Canada, and Argentina increased their market shares during 1979-84.

The European Community (EC), excluding Spain and Portugal, as a trading block, was the world's largest agricultural exporter, with \$67.3 billion worth of exports in 1983-84. If trade with each other (intra) is excluded, then the EC was the second largest region, exporting farm products worth an average of \$23.5 billion in 1983-84. The value of agricultural exports as well as the world market share of EC exports also declined between 1979-80 and 1983-84. This decline was concentrated primarily in intra-trade because extra-EC trade (exports to non-EC countries) remained constant during this period (\$23.25 billion in 1979-80 and \$23.45 billion in 1983-84).

Major Exporters of Wheat and Wheat Flour

The 12 leading exporters of wheat and wheat flour (in wheat equivalents) accounted for about 95 percent of world export volume during 1979-84. The top five exporters (the United States, Canada, France, Australia, and Argentina) accounted for 85 percent of the volume in 1979-82 and 90 percent in 1983-84. The United States accounted for almost 40 percent of the volume during 1979-80, about 41 percent in 1980-81 (when U.S. exports increased to 45 million metric tons in 1981), but only 37 percent in 1983-84 due to falling exports. In contrast, Canada increased its exports from 12.5 million metric tons in 1979 to 21.6 million metric tons in 1984, thereby expanding its share of world wheat export volume from about 17 percent in 1979-80 to 19 percent in 1983-84. During this period, both France and Argentina increased their export volume and, thus, their market shares. Only Australia, of the top five leading exporters, had a declining export market share during 1979-84.

Major Exporters of Corn

The 10 leading corn exporters during 1979-84 accounted for about 97 to 98 percent of the world export volume. The United States had 78 percent of the world's corn exports in 1979-80 but only about 70 percent in 1981-84. The other four top

exporters (France, Argentina, Thailand, and Belgium) increased their market shares during this period.

Major Exporters of Soybeans

Three leading exporters, the United States, Argentina, and Brazil, accounted for about 95 percent of world soybean exports during 1979-84. The United States accounted for 81.5 percent of the volume in 1979-80, 86.0 percent in 1981-82, and 80.7 percent in 1983-84. Argentina, like the United States, had a declining market share of world soybean exports, while Brazil and China increased their shares. (Arthur B. Mackie, Office of the Director)
